EDUCATION

Bachelor of Science in Computer Science — Expected May 2027

GPA: 3.90/4.00

EXPERIENCE

Google Developers Group on Campus (Co-Lead) | Feb 2026 – Present

- Help plan and run tech events like RoboSoccer, live stream watch parties and workshops for students to teach how to build a robot and play soccer with it.
- Support the team with organizing meetups and sharing Google developer resources. Promoting Google on campus.

Math Learning Assistant | Aug 2025 – Present

- Explained complex mathematical concepts in group settings, strengthening communication and analytical problem-solving skills
- Supported students in developing structured thinking applicable to technical problem solving

International Student Ambassador | Jan 2024 – Present

- Mentored incoming students and coordinated orientation events with faculty and staff
- Developed leadership, collaboration, and organizational skills in team environments

PROJECTS

(Startup) Continuing Education Learning Management System (LMS) — Production Web Application [view live project](#)

Tech: Next.js, TypeScript, PostgreSQL, Prisma, Stripe, Docker

- Built and launched a production LMS serving 20+ real users in its first month and processing live payments via Stripe
- Designed full-stack architecture with secure authentication, role-based admin dashboard, and automated certificate generation
- Implemented scalable payment workflows, media delivery, and file upload infrastructure for online course distribution
- Deployed the platform using Docker Compose with automated database migrations and environment-based configuration

- Maintained reliability and iterated features based on real user feedback

QuietHelp — Anonymous Peer Support Platform

Tech: Next.js, Spring Boot, FastAPI, Redis, PostgreSQL, Docker

- Engineered a distributed microservices platform with real-time WebSocket chat and AI-assisted support
- Designed an API gateway with rate limiting and service routing to improve system reliability
- Integrated fault-tolerant chatbot services to maintain availability during external failures
- Deployed containerized services behind a reverse proxy using Docker infrastructure

E-Commerce Platform (MyShop)

Tech: Spring Boot, MySQL, Redis, Docker

- Built a microservices e-commerce system with authentication, product, cart, machine learning based recommendation service and payment services
- Implemented secure JWT authentication with role-based access control and Redis token management
 - Integrated Stripe checkout and deployed services in containerized environments

SKILLS

Languages: Java, TypeScript, Python, C++, SQL Frameworks: Spring Boot, React, Next.js

Databases: PostgreSQL, MySQL, MongoDB, Redis Tools: Docker, Git, GitHub, AWS, CI/CD
